as developer of the

SUNVESTING APPLICATION

Sunvesting is a native iOS application which connects eco-conscious photovoltaic system owners and enables them to reinvest their generated savings into green investment projects.

PROJECT DESCRIPTION

The Sunvesting app was developed in collaboration with E.ON and the Chair of Applied Software Engineering at the Technical University Munich. Sunvesting enables photovoltaic owners to contribute to sustainability. A user's photovoltaic system can be connected to the application to track its performance and display the amount of money saved through the produced energy. These savings can be reinvested in green projects within the application. Through the Sunvesting Community, users can connect to like-minded photovoltaic owners to share and discuss topics of sustainability and solar energy.

DEVELOPMENT SKILLS APPLIED

- Implementation of a native iOS application
- Design of user interface and user experience
- Full-stack development with Apple's programming language Swift
- Delivery of a fully functional prototype including an extensive documentation
